## ***THE EAP ADVANTAGE***

Professional Sales Representatives today are constantly looking for all the advantages in the equipment they promote. The perfect sales presentation not only instills confidence with the buyer, but also a recognizable enthusiasm in the sales rep himself. The attitude of “Draw a line in the sand and I’ll stand toe to toe with any competition” has secured many valuable orders.

The compressed air dryers now being built by EAP, support this attitude. The advantages below will withstand any and all competitive analysis:

- Allen Bradley Micro Logic 810 PLC controller with 4 line digital display, cycle time adjustment, cycle stepping, data highway compatibility.
- Stainless steel control line tubing
- Stainless steel 3 piece fittings
- Stainless steel inlet valve with Teflon seats, rated for 1000 psi.
- ASCO solenoid valves with L.E.D. status indicator
- Angle seat Schubert & Salzer exhaust valves
- Purge balance regulator
- High flow, low lift check valves
- North American, premium quality desiccant
- 18 month comprehensive warranty
- 3 year warranty on the inlet valve
- Direct access to the owners of EAP in the event of controversy
- All components are selected for their superior performance and highest reliability. Not because of price or that they are part of a company’s product line.

We firmly believe that when properly presented, the EAP dryer will give you the best opportunity to secure an order. Price becomes a non issue and your chances of retaining a very satisfied customer is clearly in your favor.

We encourage you to make our advantages clear and we are here to help in our mutual success.

Good Hunting!
